FILETRAIL® LAUNCHES RFID-ENABLED SOLUTION TO STREAMLINE EVIDENCE COLLECTION AND MANAGEMENT

Technology Creates A Secure Chain-of-Custody And Lets Users Alarm Doors and Exits To Prevent Unauthorized Evidence Removal

SAN JOSE, CA – August 12, 2009 – FileTrail Inc, the industry-leading provider of browser-based records management software and RFID technology, has created an easily integrated, highly configurable method for evidence collecting, logging, and tracking. With FileTrail’s RFID Evidence Management solution, those in the Justice and Law Enforcement fields will gain an automated system that ensures proper evidence handling and a secure chain of custody.

“Traditional bar code methods for evidence handling and management aren’t efficient,” said Darrell Mervau, Vice President of Business Development with FileTrail. “All it takes is one mislabeled or misplaced piece of evidence to disrupt a court proceeding. With FileTrail RFID, you guarantee a secure solution that spans the entire evidence lifecycle – from collection to disposal.”

FileTrail’s Evidence Management solution utilizes the latest in RFID technology to help eliminate loss and ease search and recovery. Taking security one-step further, FileTrail allows users to alarm doors and building exits to safeguard evidence from unauthorized removal.

“The entire solution is built around creating a secure chain of custody,” said Mervau. “The FileTrail solution creates an unalterable log tracing every piece of evidence and recording where it’s been, who’s accessed it, and when it was returned.”

With FileTrail’s browser-based technology, clerks, officers, administrators, and investigators can utilize the solution without little-to-no training. They can log in using any browser, and search for items based on case number, evidence type, date, officer, or any other custom field. And with automated tasks and powerful tracking tools, their evidence handling and tracking time can be cut by more than 80%.
