NEWEST RELEASE OF FILETRAIL SETS NEW STANDARD IN GLOBAL PHYSICAL RECORDS MANAGEMENT AND FILE TRACKING

FileTrail 4.0 extends product leadership through technology innovation and improved usability

San Jose, CA – April 15, 2010 – FileTrail, a global leader in physical records management software and RFID tracking solutions today announced the release of FileTrail 4.0. This new release extends the company's leadership by delivering key advancements across three product dimensions: architectural leadership, global applicability, and usability for end-users. The new release gives clients more ways to reduce costs, ensure compliance, and streamline processes related to managing and tracking physical records.

Key highlights of the 4.0 Release:

- Architecture leadership – FileTrail 4.0 leverages a pure services architecture (SOA) built on .Net Framework 4. Further, a complete and fully documented SDK is available that allows FileTrail customers and partners total flexibility to design new applications, enhance existing 3rd party applications, and to develop custom integrations and clients as needed for their unique environments.
- Global applicability – Localization of language, date format and time zones can all be personalized for each user. FileTrail 4.0 is available in English, French, Spanish, German, Arabic, and Portuguese. Further, clients and partners can easily configure the browser-based client to add any additional languages required for their unique environment. As a configurable user-level setting, one server can support a multitude of different language preferences.
- Web 2.0 Standards – End user adoption is key to successful software and technology deployments. FileTrail 4.0 includes Web 2.0 tools that lead to a dramatically improved and streamlined user experience. These technologies put more information in the users hands and provide more continuity as they work through their tasks in FileTrail.

“ This new release, from a technical stand point and a user experience, allows us to deliver a truly global solution. Now if a company is managing active records in a departmental file room or archived records stored off site anywhere in the world, they now have knowledge of what exists, its exact location, and assurance that it has been handled correctly per company policy - all this information from within any system.” said Darrell Mervau, President of FileTrail.

“FileTrail has consistently delivered value to our organization in terms of the quality of their solutions and the commitment to our success,” says Ember D. Krumwied, CRM, of Investco

Financial Corporation. “Investco has been a customer for three years and we appreciate FileTrail’s advancement of their product and the continual investment they put into their product line. This 4.0 release provides additional tools and allows them to continue to be a partner for us, helping solve our Physical Records Management needs for years to come.”

“With over 400 clients and 1,800 RFID sites managed around the globe, we have truly unique visibility into the records management and tracking challenges across multiple industries and across multiple continents”, says Tom Pemberton, VP of Marketing at FileTrail. “We used this valuable insight to create a game-changing set of capabilities that we’re rolling out in 4.0. This is an exciting time for FileTrail.”

About FileTrail Inc.

FileTrail is the industry-leading provider of records management software and RFID tracking technology for the office environment. Founded in 2000, and based in Silicon Valley, FileTrail has worked with over 400 leading organizations across the public and commercial markets to deliver file management and tracking solutions that reduce cost, ensure compliance, and streamline business processes.
